Building Trust in Transition: The New Era of Cryptographic Certification

As quantum computing moves closer to reality, the global cryptographic community faces a pivotal moment. The 14th International Cryptographic Module Conference (ICMC) brings together leaders from government, industry, and academia to explore the most pressing challenges and solutions in cryptographic assurance. ICMC26 will focus on the global transition to post-quantum cryptography (PQC), the rollout of new NIST cryptographic standards, and the evolving landscape of certification programs like FIPS 140-3, Common Criteria, and emerging international frameworks. Attendees will engage in in-depth discussions on algorithm selection, implementation strategies,

SPECIAL CONTENT

- **International Perspectives:** Plans for PQ Transition Around the Globe
- **PQ Preparation by Industry:** Media/Internet Devices, Vehicles, Networks, Payments
- **New Certification Requirements:** Cryptographic Resilience in New National Frameworks
- **Special Topics:** In-Depth Curated Sessions with Invited Speakers on Cloud, AI, SBOM, and more.

PQ CYBER DAY

Post Quantum Enterprise Preparedness. This optional special-focus event will help you prepare now for future threats and will include important, actionable information for anyone concerned with cybersecurity in a data-dependent enterprise.
